

ABSTRACT OF THE DISCLOSURE

The purpose of the invention is to provide a device convenient for carrying pallet loaded with article into and/or from container. The introducing device 3 is comprised of: the stage 5; the first lifting/sliding devices 13a, 13b, 13c and 13d, which support the pallet 11 to allow it to move horizontally while keeping it lifting up to the floor surface of the stage; and the second lifting/sliding devices 29a, 29b, 29c and 29d, which receive the pallet from the first lifting/sliding devices and support it to allow it to move horizontally while keeping it lifting up to the floor surface of the container 2. The introducing device 3 is possible to be used for discharging operations.
